Summary

Software Engineer who builds web and mobile products from the database and API layer to the UI and deployment. Has shipped B2B platforms, e-commerce stores, restaurant ordering systems, and admin tools for businesses in Saudi Arabia, Spain, and the US. Also adds AI to real products, including document search over Arabic research papers, natural language database tools, and voice agents. Cares about building software that is fast, simple to use, and easy for non-technical teams to run.

Education

Institute of Space & Technology — Islamabad, Pakistan
Bachelor of Science in Computer Science — *Sep 2020 – Jul 2024*

- **Gold Medalist**: Awarded for securing 1st position in the graduating batch for academic excellence.

KRL Model College For Boys — Kahuta, Pakistan
HSSC (Pre-engineering) — *2018 – 2020*

Experience

Full Stack Developer – Freelance — Jan 2026 – Present
Independent Contractor (Remote)

- Built web storefronts, iOS and Android apps, and admin panels for a Spanish grocery wholesaler and a restaurant, taking both from manual, phone-based or third-party-platform ordering to their own online channels.
- Integrated Spanish payment and shipping systems (Redsys, MRW), delivery-zone checks, and trilingual PDF invoicing, so orders move from checkout to shipment without manual paperwork.
- Built admin panels that let owners edit menus, prices, pages, and announcements themselves, with one-click Spanish-to-English translation and no developer needed.
- Delivered bilingual, SEO-ready marketing sites for food brands, and fixed production bugs in a React Native car-search app that indexes 6M+ listings (favorites sync, filters, auth handling).

Software Engineer — Jul 2024 – Dec 2025
Modern Intelligent Solutions — *Riyadh, Saudi Arabia*

- Built and shipped full stack web applications end to end, from database design and APIs to the UI and deployment.
- Built search and data-heavy features that stay fast on large datasets, including autocomplete, multi-filter search, bulk imports that load tens of thousands of records in seconds, credit-based access, and audit logs.
- Added AI features where they fit: document search with page-level citations, chat assistants that answer questions from a database in plain English or Arabic, and voice agents. Supported Arabic (RTL) and English across every interface.
- Built data pipelines on GCP that verify, scrape, and enrich leads at scale, handling tens of thousands of records per run and collecting 2M+ records in total, with checkpoints so interrupted jobs resume where they stopped.
- Turned raw business data into decision tools, such as customer segmentation and scoring that replaced hours of manual review with personalized results in under a second.

Software Engineer — Nov 2023 – Jan 2024
Voilabs — *France (Freelance)*

- Built and deployed full stack web applications on AWS, covering the UI, backend, and file handling. Automated a manual document task that took about 45 minutes down to under 90 seconds.
- Connected LLMs to products through APIs, using structured JSON output, retrieval over user-uploaded documents, and streaming responses.
- Fine-tuned transformer models for document understanding and exported them to ONNX and TFLite, so they run without a GPU or PyTorch.

Software Engineer Intern — Aug 2023 – Sep 2023
Ksoft — *Islamabad, Pakistan*

- Implemented real-time object detection solutions using computer vision models.
- Designed intuitive user interfaces and contributed to mobile application development to read & parse business cards.

Technical Projects

Ali Doner, Restaurant Ordering Platform — *Next.js, React Native (Expo), TypeScript, REST API*

- Co-built a customer website, mobile app, and admin panel on one shared API for a restaurant in Spain, giving it its own ordering channel instead of paying Glovo and Uber Eats 15–30% commission. Orders feed straight into the existing POS.
- Built an admin panel where the owner edits all content in Spanish and English with one-click auto-translate, plus polygon-based delivery zone checks before checkout and GDPR-compliant accounts (email verification, consent-gated push notifications, soft delete).

Brothers Mart, E-Commerce Platform — *Next.js, Expo, Node.js, Express, Redsys*

- Built a trilingual (EN/ES/PT) store for a Spanish wholesale grocer: web storefront, iOS and Android app, admin dashboard, and REST API, taking the business from phone orders to a live online shop.

- Added Redsys card payments, one-click MRW shipping labels, IVA-compliant PDF invoices, and a Codemagic pipeline that ships every push to `main` as an iOS TestFlight build.

ThunderJaw Restaurant POS — *Electron, React, TypeScript, PostgreSQL, Knex*

- Co-built a restaurant system covering a desktop POS, kitchen queue, a VPS API with WebSocket sync, and a driver mobile app with live GPS tracking and in-order chat. Web and app orders land in the kitchen with no re-entry.
- Added role-based access control, payroll, purchases, and expense tracking in place of spreadsheets, plus automated PostgreSQL backups every 30 minutes.

Distributed Email Verification System — *Python, GCP, Docker, FastAPI, Redis*

- Built a pipeline that splits a lead CSV into chunks and fans them out to up to 1,000 GCE VMs, then merges the results and scales back to zero. Replaces paid verification vendors estimated at $500–$3,000 per month.
- Classifies addresses into 9 categories using SMTP checks and catch-all detection, with Spamhaus monitoring that makes a VM release its work and shut itself down to protect the sending IP.

Multi-Doc Agent — *LlamaIndex, Gemini Vertex AI, FastAPI, Python*

- Designed a two-tier multi-agent RAG system with one agent per document and an orchestrator that uses a multilingual reranker to limit each query to 3 agents, keeping cost and latency flat as the library grows.
- Serves cited answers with page numbers and source links in Arabic and English across 547+ research documents, with parallel, resumable indexing so restarts skip finished work.

Imagini, B2B Leads Platform — *React, FastAPI, PostgreSQL, Redis, Docker*

- Built a lead search platform, with 12-filter search, Redis autocomplete, a credit-based email reveal that never double-charges, and an admin panel with full audit logs.
- Bulk CSV imports with asyncpg `COPY` load tens of thousands of records in seconds, while encrypted cursor pagination and streaming CSV export keep memory use flat on large result sets.

Certifications

Generative AI Fundamentals – *Google*
AI For Everyone – *Coursera*
Pandas – *Kaggle*
Applied Software Engineering Fundamentals – *Coursera*
Linear Algebra for Machine Learning and Data Science – *Coursera*
Calculus for Machine Learning and Data Science –*Coursera*
Backend Development & DevOps – *Boot.dev*

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3, Go
Frontend & Mobile: React.js, Next.js, React Native, Expo, Redux, TailwindCSS, Material UI, Electron, Streamlit
Backend & Cloud: FastAPI, Node.js, NestJS, Express.js, Flask, Docker, AWS, Google Cloud Platform (GCP)
AI & Machine Learning: PyTorch, LangChain, LangGraph, LlamaIndex, Gemini Vertex AI, OpenAI API, RAG Pipelines, Hugging Face Transformers
Databases & Tools: PostgreSQL, MongoDB, Redis, Elasticsearch, Supabase, Pinecone, Weaviate, Knex.js, GitHub Actions
Concepts & Methods: Retrieval-Augmented Generation (RAG), Multi-Agent Systems, REST APIs, WebSockets, CI/CD, RBAC, i18n, NLP, Computer Vision, OCR, Prompt Engineering, Distributed Systems
